Excellence in ETRM

DATA ANALYTICS

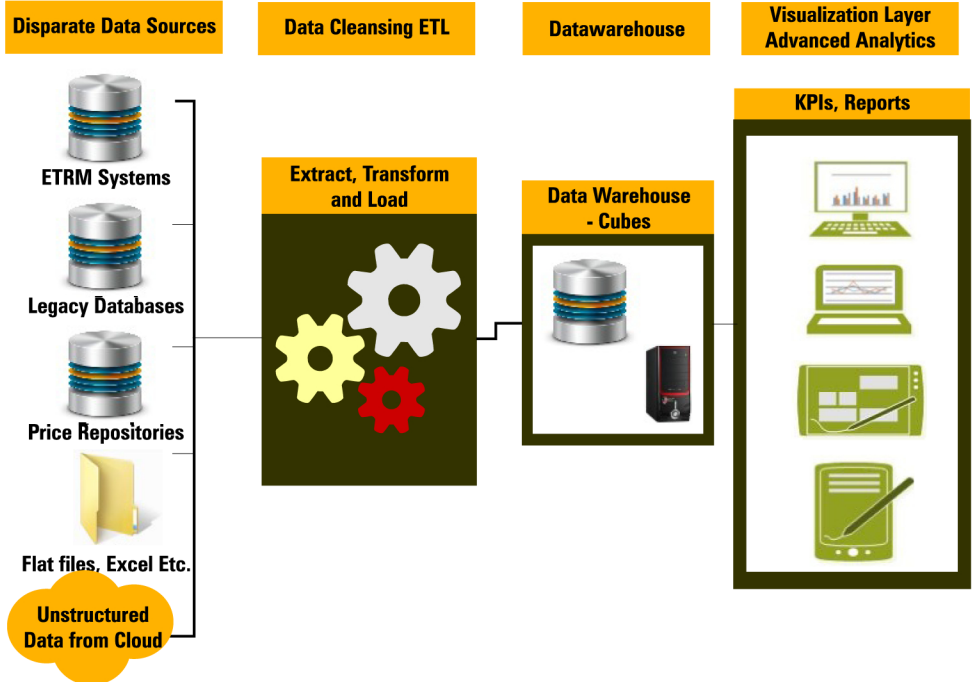

For Commodity Trading

Commodity trading organizations are highly data-driven. Timeliness, accurateness and completeness of these data are quintessential to the extremely volatile trading business. Disparate sources and types of data along with positions maintained in spreadsheets pose major problems for consolidated analysis and reporting. Traders and Risk analysts lose valuable insights due to lack of integration of data from all the sources. DCT's data analytics services help trading organizations meet these challenges by building data warehouses and provide you with visualization capabilities that can greatly improve your profitability using KPIs, metrics and dashboards. DCT can help transform your organization's decision-making process to insight-driven.

Challenges

1. Disparate sources of data
2. Format of data inconsistent
3. Integration of unstructured data
4. Consolidated reporting of trades and positions from legacy systems
5. Data maintained in Spreadsheets
6. Lack of analytical tools to provide valuable insights KPIs

DCT's Architecture for Data Analytics

The DCT Advantage
